**Automatic Instance Management**

This example is applicable to the following scenarios:

Using both Packer and Terraform is applicable to the demand for automatic generation of images and creation of ECS instances based on these images, that is, full automatic management from image generation to ECS instances creation.

**Solution Architecture**

```
"builders" : [ {
  "type" : "alicloud",
  "ecs_source_image" : "centos7u2_64_40G_cloudinit_20160728.raw",
  "instance_type" : "ecs.n1.tiny",
},
```
